FRONT MAINTENANCE

The DIAMOND is a perfect fit for a wall application because of its front maintenance system. With the help of a T-shaped tool, you can remove the modules from the front to replace them easily. This process is a one-man job. Back maintenance is also possible only if you are removing the module above or below the defective module. This way, it's possible to pull out the defective module through the back of the cabinet frame

HIGH RESILIENCE

The DIAMOND is highly resistant to humidity, extreme temperatures, and particle ingress. It's a reliable product that will perform normally and stay true to its original condition even in a harsh environment.

FAN OPTION

Even though the DIAMOND is in itself a reliable and durable LED display, you can further prolong its lifespan by choosing to add a fan to the power box. This option allows the power box to operate efficiently while remaining cooler, putting less stress on the internal components of your LED display. It also serves as additional protection against heat if your project is to integrate a LED display somewhere permanently exposed to sunlight.
