MEDIA

ANYWHERE, ANYTIME FOR ANYTHING AND ANYONE

Digital out-of-home media is the fastest-growing segment of the industry. Artixium developed a smart range of solutions and products for media applications, designed with the latest technologies and manufactured with the highest standard and quality control.

Admired retail locations require higher levels of design, interactivity, and overall attractiveness. Retail designers require an extended toolset to achieve a smashing customer experience. With the ever-increasing implementation of LED displays, integrated digital LED displays are now a viable option.

Artixium's media product range includes all the necessary types of solutions. From front to back maintenance cabinets, transparent or ultra HD displays including customized products for retail.

HIGH END OUTDOOR LED DISPLAY

The **AXXION600 2.0** was especially studied for high-end outdoor applications. Its IP67 and 16:9 ratio make it the ideal solution for anyone who wishes to invest in a high-quality display with a long lifespan. Light, robust, conceived to fit numerous projects, and easy to integrate and maintain,

the **AXXION600 2.0** is one of our best outdoor products. The **AXXION600 2.0** ingress protection ensures a waterproof and dustproof product. Its aluminum back shell design dissipates heat, and you can remotely monitor your display's condition at any time. Once properly integrated, this product is virtually unailing.

 COBALT P6.6

COBALT 90° C

HIGH BRIGHTNESS OUTDOOR LED DISPLAY

The **COBALT** was designed to be a robust high brightness outdoor LED display. It comes with a smart heat dissipation design, the highest brightness in the LED display market, and can be maintained from the front as well as from the back. Its resilience to both water and dust ingress makes it the ideal solution for fixed outdoor LED applications.

Upon request, we can supply cabinets especially cut for curved or angled applications, which combined with the different cabinet sizes available make this product very adaptable to most outdoor LED display projects.

10000 NITS is the highest brightness available on the LED display market. Your led display will stay bright for a longer period of time. For instance, this product is estimated to maintain a 7000 NITS brightness after 6 years of intensive use.

The **COBALT** is fully resistant to dust ingress and even high pressure water projections. This product will stay true to its original condition no matter what.

DIAMOND

OUTDOOR LARGE PITCH CABINET

The **DIAMOND** is designed as a cost-effective fixed outdoor LED display. Its user-friendly features allow for easy maintenance and a quick integration process. Integrated cabling and independent modules and a power box make the installation of the DIAMOND trouble-free.

The **DIAMOND** is available from P4.2 to P10, we developed this product to offer an affordable cabinet as well as an extremely fast and easy-to-integrate solution for your fixed outdoor LED application.

Even though the **DIAMOND** is in itself a reliable and durable LED display, you can further prolong its lifespan by choosing to add a fan to the power box. This option allows the power box to operate efficiently while remaining cooler, putting less stress on the internal components of your LED display. It also serves as additional protection against heat if your project is to integrate a LED display somewhere permanently exposed to sunlight.

GRENAT

WALL OUTDOOR LED DISPLAY

The **GRENAT** is a very reliable product when it comes to outdoor LED displays. With an IP65 and a P2.6 pixel pitch, it is an excellent combination of display quality and robustness. Available in three sizes, the **GRENAT** cabinets can be assembled to fit your requirements. This product is wall-mounted and suits perfectly any outdoor advertising installation, as well as a visual enhancement to any desired structure.

The IP65 means that the **GRENAT** is totally protected from dust and can even withstand a low-pressure water jet. This product, once integrated, will stay true to its original condition. The **GRENAT** is an investment in the long run that will allow you to display your visual content with the same quality for many years.

CHARISMA CHRISTIAN CHURCH

PARIS - FRANCE

A 50sqm screen of 4 x 12 meters, with our **IRON LED cabinet** (predecessor of the **IRON 2.0**), can be seen in the biggest evangelical church in France.

The installation took about 36 hours to 4 technicians, with absolutely no setbacks. Using the IRON cabinets 500 x 500 mm, P3.91 in front maintenance. The installation process was smooth. The screen of 50sqm was mounted, held by six trusses, cabled, and configured with ease.

After the successful screen installation, our team concluded with training so the client can become 100% autonomous to handle the screen video content and maintenance themselves.

The front maintenance on the **IRON** is intuitive and can be done by a single technician with ease. Magnetic modules are removable with the help of a tool shown in the picture above. Pull out and unplug the module, then replace it with a new one.

The module maintenance process is as simple as that. Final touches were made to ensure a long screen lifespan, it's safe to say our **IRON LED cabinet** was perfect for the job. The alignments of the cabinets and the screen quality are flawless.

With the new **IRON 2.0**, such screens can be made and maintained with even more ease than with the **IRON**.

Front maintenance

With a size of 500 x 500 x 63 mm and a weight of 6.9 kg per cabinet, the **IRON 2.0** is the most reliable product for indoor installations. It's thinner and lighter than its predecessor. Because of its front maintenance, it suits perfectly installations against a wall where you usually don't have access to the back of the cabinet. Built to be quickly and easily installed, the **IRON 2.0** is a reliable product with a long life expectancy. Furthermore, it's a cost-effective LED display whilst allowing a thin pixel pitch led display starting at P1.9.

The **PLATINUM** is one of our most reliable products for outdoor applications, ranging from P5.3 to P10. Mostly suitable for an installation against a wall with no back access possibility, the **PLATINUM** is an excellent choice if you want an easy-to-integrate and reliable product with a long lifespan.

LENTA HYPERMARKET NABEREZHNYE CHELNY - RUSSIA

 PLATINUM P6.67

Artixium installed 2 Giant Outdoor HD LED Displays in February 2019 in Naberezhnye Chelny, Russia. The ultra-bright displays were tested in the harsh Russian climate and functioned 24/7 without an issue ever since their installation.

The product used for this installation is our **PLATINUM** outdoor LED cabinet, available in P6.67, P8, & P10. The **PLATINUM** is one of the most reliable and robust products for outdoor applications. Its front

maintenance process makes it ideal for such wall applications, as it gives easy access to all the cabinets' internal parts by removing the modules from the front.

This outdoor LED application shows relevant and attractive content for the customers of Lenta, enhancing the shopping experience for the top chain store in Russia.

A fine pixel pitch and high ingress protection make the **THORITE 2.0** one of the best solutions for an outdoor LED display. It is suitable for building facades, storefronts, shopping malls as well as any other outdoor application that requires a product both performant and highly modifiable.

The **THORITE 2.0** can be integrated to a curve or an angle, concave or convex, to better fit any structure you want to overhaul with a LED display. It is a highly customizable product meant for tailored projects.

PARIS II PANTHÉON-ASSAS UNIVERSITY

PARIS - FRANCE

LITHIUM ROOF P40

MEDIA

Panthéon-Assas University, known as the top french law school, is a public college in Paris, France. With neoclassical architecture, this university incarnates the perfect contrast between classicism and modernism.

In the central entrance hallway of Panthéon-Assas University, a unique Artixium project displays a symphony of shapes and colors. This application, integrated into the building's architecture, is part of more than 10.000 students' daily life. Most LED screens are designed to be directly looked at, but this one is special as it blends in with the overall building's structure.

Located in one of the main corridors of Panthéon-Assas University, Artixium's **LITHIUM** cabinets were installed one by one. This fixed installation of 800 square meters and 690 **LITHIUM** cabinets is one of the biggest LED screens in Europe. A custom size **LITHIUM P40** cabinet has been specially designed for this product. The **LITHIUM** has since been replaced by more performant and cost-effective products, but this installation could be replicated with different LED cabinets, such as the **GRENAT** or the **PLATINUM**.

BEFORE

AFTER

ARTIXIUM

BACK MAINTENANCE

Back maintenance cabinets are more often than not very affordable LED solutions. Easy to integrate and maintain, back maintenance LED cabinets tend to be sturdy and straightforward. Since they can't rest against a wall, back maintenance LED applications are integrated with many different methods, from traditional support structures to creative truss hanging systems.

FRONT

BACK

Sheremetyevo International Airport is an international airport located in northwest central Moscow. It is a hub for passenger operations of the Russian international airline aero fleet and is one of the three major airports that serve Moscow.

In 2015/2016, Artixium was asked to take care of the production and installation of 2 large LED displays. The first screen was installed at the beginning of 2016, 380sqm of **HYDROGEN P10** mm were installed and commissioned in less than 72h.

The second screen is located on the road, at the entrance of the airport, and was also produced and managed by Artixium. It consists of 280sqm of **HYDROGEN P16** installed on a metallic structure.

NEUTRON ©

FIXED INDOOR & OUTDOOR LED DISPLAY

The **NEUTRON** is one of our solutions for cost-effective fixed LED installations. This indoor and outdoor product is the perfect balance between simple engineering and optimized components. With user-friendly features, a size of 500 x 1000 x 77 mm, and a weight of 14 kg, the **NEUTRON** is fast and easy to integrate, making your LED display project as simple as possible.

The **NEUTRON**'s design allows +/-10° curves. This tool-less feature doesn't require any additional accessories, it's directly integrated into the frame to save time during integration.

Each of the **NEUTRON**'s modules can easily be accessed from the back and has an integrated handle to ensure a quick and easy replacement. Maintaining the **NEUTRON** is a simple one-man job.

ECLIPSE 360

ST TROPEZ - FRANCE

 PROTON P3.9

Avec un ratio 16:9, des couleurs vives et un rapport de contraste élevé, l'**ECLIPSE** est conçu pour offrir une véritable expérience cinématographique dans la quiétude d'un cadre privé.

The renowned coastal town of St-Tropez is home to the world's largest private outdoor theater ever installed. In partnership with Illusy, Artixium designed, manufactured, and installed this gigantic 36sqm LED screen.

Cutting-edge LED technology and advanced mechanical engineering merged into a subtle combination to create the **ECLIPSE**. This massive LED screen, surrounded by a top-of-the-notch acoustic sound system, emerges from the ground in less than a minute.

For this project, the **PROTON**, ancestor to the **PROTON 2.0** was our product of choice, with 144 P3.9 cabinets. The **PROTON** was our preferred solution for fixed installations. Today, we would build such screens with the **PROTON 2.0**, or even with the **NEUTRON**, as both these products are reliable, simple in their composition yet very performant and easy to integrate into such tailored structures.

PHOTON

COST-EFFECTIVE INDOOR & OUTDOOR

The **PHOTON** is our traditional solution for cost-effective fixed LED displays. This product is the perfect balance between straightforward engineering and optimized components. Measuring 576 x 576

Artixium installed a 42sqm screen in the Graduate Institute of International Studies, Geneva, Switzerland, which is continental Europe's oldest school of international relations and was the world's first university dedicated solely to the study of international affairs. We took action in their main conference room by laying out an LED wall able to split into two separate parts on demand. The product of choice for this installation was the **TRITIUM** with a P3 pixel pitch. The an-

cestor of the **TITANIUM**, the **TRITIUM** was designed to perform in many different environments. The product's light weight makes its installation manageable by one technician. This product was our original high-definition / fine pixel pitch go-to LED cabinet. Yet, it has since been surpassed by our newest Ultra HD products, which are lighter and more performant visually.

RETAIL

Our retail products are made to be as light and thin as possible to facilitate their integration, and they offer a range of fine pixel pitches for qualitative indoor LED displays. These products tend to be highly modifiable and will fit the most imaginative projects with ease. They make for great visual enhancements due to their visual performance and physical adaptability.

QWARTZ MINI 90°

FINE PITCH SHELF LED DISPLAY

The **QWARTZ MINI** LED display is a very good product for shops and scenographic applications. Its unique narrow design makes it ideal for in-store product promotion or creative displays. Both very thin and light, the **QWARTZ MINI** cabinets can be affixed to a wall or a structure with ease to create a framed or continued display. The different cabinets can also be assembled in a curve to add yet more creative options for your LED display. The data connexion is wireless, facilitating integration and creativity.

Unlike other LED cabinets that require to be physically assembled to create a coherent display, the **QWARTZ MINI** dimension and wireless connexion give a lot more creative options. By splicing different modules, you can create an original and beautiful display with a unique frame effect.

LECLERC HYPERMARKET

LIBOURNE - FRANCE

GRANITE P2.6

Mass distribution has been one of the first industries to understand the great potential of LED screen-based advertisement. Products such as this GRANITE banner are ideal to promote ever-changing products, discounts, etc. To minimize the use of non-reusable means of communication (paper posters, fabric banners, etc.) and to maximize cost-effectiveness, more and more businesses tend to invest in such LED applications.

INTERSPORT

LANGUEUX - FRANCE - WITH OUR PARTNER INTELLICAST

GRANITE P3.9

Every kind of shop, from the smallest stores to the greatest distribution chains, can benefit from the numerous advantages offered by the LED display technology. Giant LED displays make for a dynamic communication platform, allowing to broadcast animated visual content to attract customers better than simple posters. This GRANITE screen is a perfect example of how a giant from the sports equipment industry can further improve its visibility thanks to the LED display technology.

QWARTZ ULTRA SLIM 90°

ULTRA SLIM LED CABINET

The **QWARTZ ULTRA SLIM** is our thinnest (28mm) and lightest (3.5kg) indoor LED cabinet. It is well suited for indoor wall LED applications and comes with a fine pixel pitch (P1.5 & P1.9), even allowing it to attain the well-renowned 8:9 or 16:9 ratios. This front

access cabinet is a high-end product that is well suited for indoor advertisement, visual enhancement, monitoring rooms, control centers, etc.

TRANSPARENT

Transparent displays are an evergrowing trend in the LED industry as they offer the possibility of merging your LED display with the overall structure that supports it. The transparency is possible thanks to the composition of such LED cabinets: instead of traditional modules, the LEDs are laid out on stripes. By leaving as much space as possible between said stripes, you allow a certain amount of visibility through your LED display.

NEON

TRANSPARENT SEMI-INDOOR LED DISPLAY

The **NEON** is the best LED solution for a semi-indoor application or for any LED display you want to be able to see through. Its brightness lets you display visual content from the inside of your building to the outside. Whether it's a storefront or a window, any of these surfaces

can serve as a support for a vivid LED display that will still allow transparency. This is possible thanks to the asymmetric pixel pitch, leaving a small gap between each LED stripe for people to see the display as well as what's behind it.

NEON CURVE

CURVED TRANSPARENT SEMI-INDOOR LED DISPLAY

Highly customizable and sharing the same transparency properties as the **NEON**, the **NEON CURVE** is the perfect solution for a LED application behind a glass structure that isn't just rectangular and flat or for any application that you want to be able to see through. The frameless cabinets can be curved inwards or outwards, or even

angled to perfectly fit the structure you want to enhance with a LED display. Whether it's on or off, people will be able to see through the **NEON CURVE**, allowing for an aesthetic blend of your display and the inside of your business. Its brightness lets people see clearly what is displayed on the **NEON CURVE** from the outside of your building.

NITROGEN

TRANSPARENT OUTDOOR LED DISPLAY

The **NITROGEN** is an outdoor transparent LED display most suited for architectural setups. With a pixel pitch ranging from P15a to P50a, it's designed for long-distance viewing and large display surfaces. The **NITROGEN** is highly transparent, lightweight, and adaptable to any type of building. Furthermore, this product is very resistant and can withstand permanent use in the most demanding environments.

The **NITROGEN** is fully IP65 and UV resistant, which means it's a very tough and trustworthy product. It will perform day and night in very harsh environments with no issue whatsoever, making your building-sized LED display a sight permanently etched in your district's visual identity.

MICA PLUS

FLEXIBLE LED MODULE

The **MICA PLUS** is the perfect balance between the flexibility of the **MICA** and the fine pixel pitch of our **QWARTZ** range. This module-based product is adaptable to most indoor LED display projects, easy to integrate, and even easier to maintain. It is a high-end product that can perfectly fit advertisement projects, trading floors, building lobbies, and many more.

The easiest and fastest way to integrate the **MICA PLUS** is to use a steel frame (preexistent or not) on which the modules are simply magnetically affixed. These modules are mechanically linked together one by one, then there's only some wiring to do to complete the installation. This process is both fast and easy, making it very cost-effective.

INTERACTIVE

Interactive LED displays all share a common trait : their reactivity to touch. Thanks to touch sensors and specially designed softwares, these LED cabinets can react in real-time to touch and adapt their content in accordance. We tend to use these products as touch-responsive floors, ideal for showrooms, scenes, museums, etc.
